(54) Title: METHOD AND MEANS FOR CONTEXT-BASED MEASUREMENT OF WORKED TIME

(57) Abstract: The present invention relates to a method and an arrangement for a first individual to report worked time based on his context log containing information about contextual aspects, related to the first individual, as a function of time. From information from the context log, a context graph of the first individual which shows contextual aspects as a function of time is generated, and at least a contextual aspect which refers to at least one location of the first individual and a contextual aspect which refers to at least one activity on a work- or individual-related objects with the same location as the first individual are included, and, for a task performed by the first individual during a certain period of time, a working account is selected, and, based on shown contextual aspects as a function of time, the period of time that is assessed to have been used for the task is marked in the context graph as allocated to the selected working account.
